

Advanced Manufacturing / Production Engineer

Advanced Manufacturing / Production Engineer with extensive experience to commercialize, maintain and improve complex electro-mechanical products in a multinational production environment.

He has proven successful leadership to coordinate resources across multiple disciplines, departments and suppliers to solve manufacturing, quality, service and production issues. A proficient self-starter, he has been involved with product design during all phases of product development and commercialization to maximize manufacturability of product. Key strengths include extensive troubleshooting of production, technical, supply chain and equipment problems, as well as resolution of obsolete component issues, implementation of cost reductions and process design improvements. He is also experienced in safety agency approval processes and mechanical engineering issues. His technical skills include knowledge of EMC compliance, Six Sigma, ERP systems including SAP/AX, LabVIEW, C/C++/Java and Microsoft Word/Excel/PowerPoint/Visio/Project.

Meet with any of these candidates to learn more about how they could be an asset to your company!
